

Entry Level Model Maker

01-21-26

Job Description:

Aerosport Modeling and Design, Inc. is a full service prototyping facility providing a wide range of design, prototyping, and machining capabilities to our clients. Our goal is to produce the highest quality designs and prototypes possible while meeting or exceeding client expectations 100% of the time. We offer competitive salary, excellent benefits including retirement, and the opportunity to become an integral part of the Aerosport team.

We are seeking an **Entry Level Model Maker** who is passionate in their field.

Applicants must be a graduate in the field of model making or have significant experience in the field. Candidates will be responsible for creating high quality prototypes within the billable time budgeted for each project. All applicants must be able to effectively communicate issues or concerns as well as suggest improvements to project leaders.

Qualified candidates should have education in the following areas:

- Hand finishing, polishing, and painting
- Final prototype assembly
- Working with a variety of prototyping materials such as: Rapid Prototypes (SLA), Urethane, ABS, Aluminum, Acrylic, Modeling Board, etc.
- Fiberglass and Carbon Fiber lay up a plus
- Ability to read, understand, and work from 2D control drawings
- Professional verbal and written communication skills
- Computer competency to the level needed to access engineering drawings and 3D CAD data

Equipment Competency: (including but not limited to)

- Dremel, Table Saw, Band Saw, vacuum forming machines, manual mill and lathe
- 3D CAD design capability using SolidWorks a plus
- machining capabilities a plus

Attitude:

Candidates must be:

- excited about the field of design and prototyping
- eager to embrace and solve design challenges daily
- see each project as an opportunity to be a part of something bigger than just another design
- able to accept creative critique and suggestions from team members and superiors
- comfortable with not having all the answers up front, but instead, expecting the possibility of design change and reacting positively and effectively when it occurs
